

BACTO BALLS

HOW TO USE BACTO BALLS

reef bacteria + enzymes with depot effect

- crystal clear, healthy water
- easy nutrient control: reduces nitrogen and phosphates
- reduces unwanted algae growth

APPLICATION AND DOSAGE:

- supports the natural bacterial flora
- eliminates troublesome bacterial deposits and detritus deposits
- very low cost and efficient in effect
- removes organic waste products
- increases skimming and minimizes cleaning intervals
- uncomplicated dosage, especially designed for seawater
- unique depot effect, therefore effective for weeks

Highest efficiency

BACTO BALLS are absolutely reef-safe and a highly effective method of preventing elevated nutrient levels and unsightly algae fouling in marine aquariums. Crystal clear water through effective nutrient control and easiest dosing with BACTO BALLS DEPOT BACTERIA.

Dosage:

- **Every two weeks**, add two Bacto Balls per 100 liters to a flow-through area of the technical tank.
- Protect depot balls from pump suction.

The balls are made of a biodegradable polymer. A change in size is therefore normal and has no influence on the amount of bacteria contained.

Natural and reef safe

With Bacto Reef Balls you get reef-safe saltwater bacteria (when used correctly and filtered through performance-appropriate protein skimmers), which are released slowly and evenly into the water immediately after being introduced into the aquarium, where they begin their work: breaking down nitrogen and phosphates.

**BACTO
BALLS**

SHELF LIFE:

- Unopened 2 years, after opening 12 months.

SAFETY NOTICE:

- Not suitable for human consumption.
- Do not swallow.
- Wash hands after contact.
- For use in marine aquariums only.
- **Keep product away from children!**
