

CILI DIP

HOW TO USE CILI DIP

Bath solution especially for corals

- CILI DIP gently removes unwanted parasites such as ciliates (protozoa with cilia), bacteria, and algae without harming the delicate coral tissue.
- In the case of RTN/STN infection, the solution can also be used for cleaning tissue injuries.

CILI DIP

APPLICATION:

Make sure you have all the necessary materials and utensils on hand.

PREPARATION / USEFUL UTENSILS:

- **A bowl for the coral bath with the dip and a bowl of aquarium water for rinsing after the treatment.**
- **A clean pair of tweezers or tongs to hold the coral during the dip.**
- **A timer or watch to monitor the soak time.**
- **Protective gloves and goggles for your personal safety.**

■ **Step 1: Prepare water**

Mix 1 liter of saltwater with 330ml of Cili Dip.

■ **Step 2: Prepare corals**

Select the corals to be treated. Check them carefully for signs of parasites, pests or other problems. Carefully remove any debris or foreign objects with a brush or pipette. Hold the coral with clean tweezers or forceps to immerse it safely in dip.

■ **Step 3: Immerse the coral**

Slowly immerse the coral in the prepared dip water. Make sure the corals are completely covered and no air bubbles are trapped. Hold the corals in the dip for the

recommended time as instructed by us.

Use the timer or watch while doing this to keep a close eye on the soak time.

■ **Step 4: Rinse**

After the dipping time has ended, carefully remove the corals from the dip and rinse them thoroughly in a separate container of clean seawater. Make sure all residue from the dip is completely removed.

■ **Step 5: Replace corals**

Place the treated corals back into your aquarium. Monitor them carefully over the next few days to make sure they are recovering well.

CILI DIP

DOSAGE:

- Initial dosage: 250ml per 1 liter of saltwater
- Standard dosage: 330ml to 1 liter of saltwater

BATH TIME:

- 30-60 seconds
- for stubborn cases up to 90 seconds

PREVENTION BATH:

For healthy corals:

- 200ml to 1 liter of saltwater
- **BATH TIME:** 30 seconds

NOTES:

- Always read and follow the specific instructions and recommendations for the Fauna Marin Cili Dip product.
- Skimmers, phosphate adsorbers and UV degerminators can and should be operated after treatment.
- Always wear protective gloves and goggles when handling the dip to protect yourself.
- Keep Cili Dip away from children and pets and store according to instructions.
- Never use a higher dosage than recommended as this may harm the corals.
- Note that Cili Dip may not be suitable for all coral species. Consult an experienced coral breeder or a specialist to ensure that Cili Dip is appropriate for your specific corals.

CILI DIP

INGREDIENTS:

Inorganic salts, oxidising agent, stabilizer.

SAFETY INSTRUCTIONS:

- Intended for use on marine aquariums only.
- Not for human consumption or pet food preparation.
